* The SAI Search Committee discussed **Three** candidates after **Screening/ Formal Interview**. Upon careful consideration, all members unanimously agreed to recommend One candidate to **Formal Interview**.

No	Name	Decision	Education	Previous Position and Employer	Positive Comments	Negative Comments
1	CHEN Ziyi	On-hold	Electrical & Computer Engineering/ University of Utah	Postdoctoral Research Associate/ University of Maryland (College Park)	Solid publication and good educational background.	His research leans towards theory, primarily focusing on optimization, security, and reinforcement. During the interview, he seemed to lack overall planning, his research thinking was too superficial, and he lacked a PI (Principal Investigator) mindset, making him weaker than other candidates interviewed at the same time, such as Xu Siyuan.
